

Get started in minutes

The easiest way to run your OpenClaw AI agent — no terminal, no technical setup, no headaches. Entropic wraps OpenClaw in a desktop app that just works.

SETUP STEPS

1

Download Entropic

Go to entropic.qu.ai/download and grab the free installer for your operating system.

macOS · Windows · Linux

2

Install and sign in

Open the installer, create your account, and follow the on-screen onboarding. Entropic guides you through every step.

3

Choose your AI provider

Select from Anthropic, OpenAI, Google, Meta, Mistral, or DeepSeek — or bring your own API keys. Switch models anytime in Settings.

4

Connect your tools

One-click integrations for Gmail, Google Calendar, WhatsApp, Discord, Telegram, and iMessage — no manual key setup required.

5

Start chatting with your agent

Your agent can browse the web, read and write files, schedule recurring tasks, and remember context from past conversations.

PRICING

Pay-as-you-go credits — no subscription needed. Top up with Stripe and track usage in-app. Prefer your own billing? Use local keys mode with your own provider instead.
